

## REAL-TIME

We are proud to present our real-time data display application. In conjunction with the ability to network many locations for analysis, the realtime count function provides the user with immediate information on the actual number of visitors inside the facility to enable the user to react quickly and specifically to each situation.

## COMPLETE, SOPHISTICATED, USER-FRIENDLY SOFTWARE

Infodev's Select software is the most powerful tool on the market for data analysis and presentation. It transforms the raw data into a decision-making tool and gives the user extensive flexibility in formulating the reports specifically adapted to their needs.

## CUSTOMER SUPPORT

We believe not only in providing the best solution to our clients worldwide, but also in ensuring that our clients are 100% satisfied with our proposed solution! For this reason, we put a significant priority on our customer support division. We offer a full range of integrated services to provide our clients with essential training, learning, information, and documentation solutions when and where they need them. Our success is our clients satisfaction!

# ACCURATE

## PEOPLE COUNTING SYSTEMS FOR THE GAMING INDUSTRY

"We get over  
98% accuracy rate!"

Michel Gougeon, Vice President,  
Corporate Security, Loto-Quebec  
(head of 3 state-run casinos in Canada),  
is very satisfied with our systems.

## ABOUT INFODEV

Infodev's core business is counting people electronically, wherever they are, both in vehicles and in retail environments. Some of our most prestigious clients include malls, museums, airports, train / bus stations, and public transit authorities worldwide.

We design and manufacture accurate, easily installed and reliable automatic counting systems delivered with unsurpassed customer service and support.

We innovate constantly to offer our clients a wide range of counting solutions based upon their specific needs. Infodev is considered a leader in the automatic counting industry.

# DEPENDABLE HARDWARE & POWERFUL SOFTWARE

## ACCURACY

Infodev's system uses the most advanced technologies in electronics, data processing and signal treatment. Exceeding our client expectations, our system has consistently achieved a high level of accuracy – over 98%! With our excellent reputation for reliability, we are the casinos' first choice for people counting systems.

## AESTHETICS

We understand the importance of your requirements and the principle of "Customization!" We will collaborate closely with you to ensure that each sensor is aesthetically adapted to fit the colour and interior design of each location.

### Directional Counting

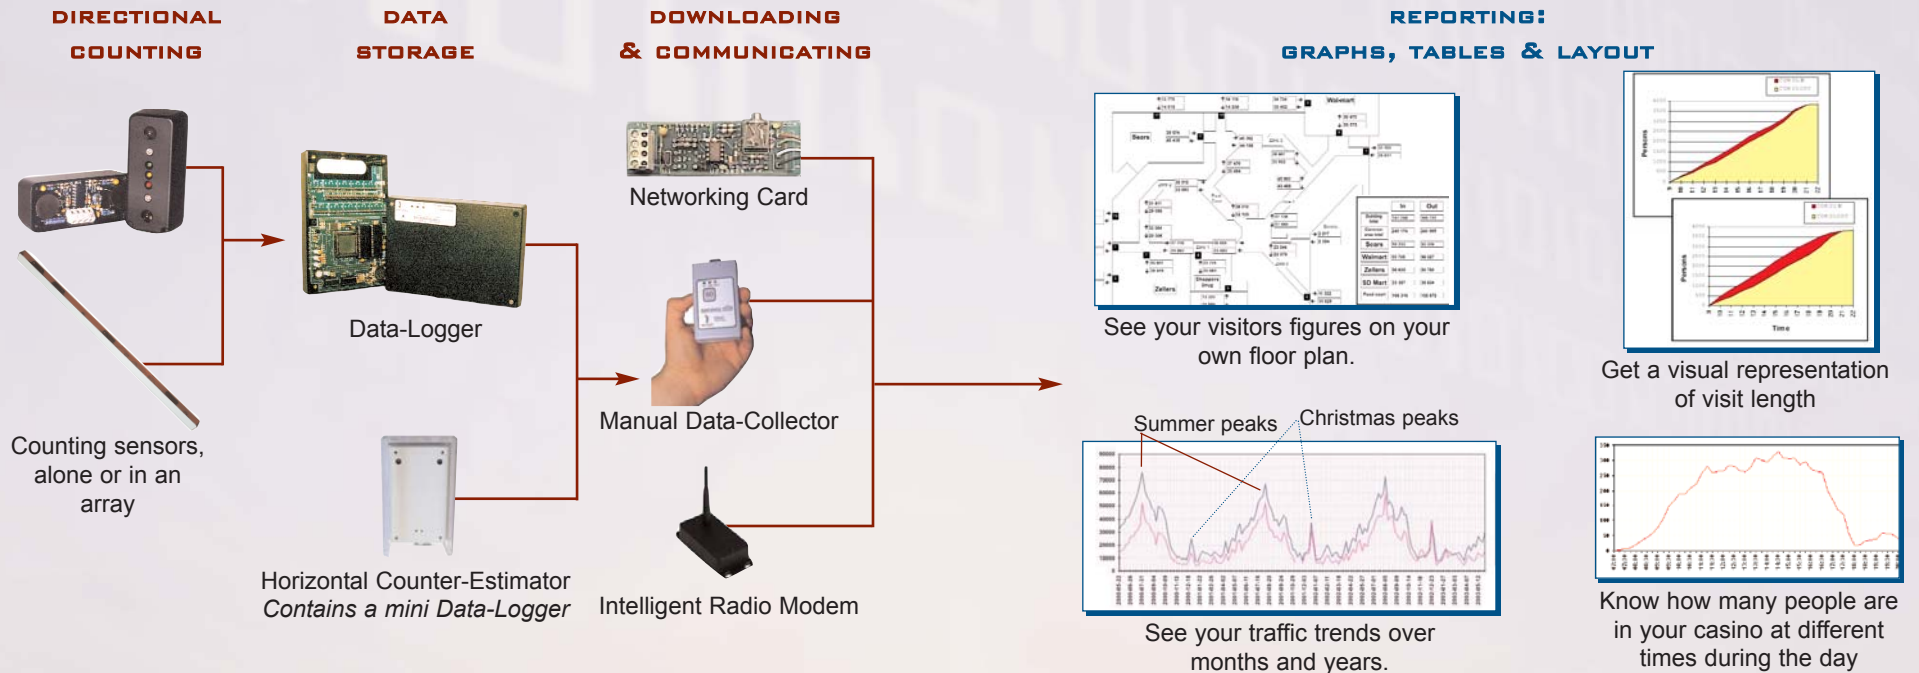

- Vertical (overhead)
- Horizontal (halls & passage ways)

### Data Storage & Transfer

- Up to 3 years of data in ONE Data-Logger
- Wired or wireless network

### Reporting

- Traffic distribution & patterns
- Convert data for use in other programs

Our equipment includes microprocessors, memory and high-speed communication channels compatible with most PCs and modems. The detectors are like a pair of cameras looking out. Several times per second, the system's processor analyzes the detector signals.

The decision to count is completed in parameterized software. Our counting algorithms eliminate duplicate counts of people coming in and out of an entrance, as well as visitors simply going through your casino to reach another final destination.
