KEEP TRACK OF WHAT MATTERS

AUTOMATIC PASSENGER COUNTING SOLUTIONS

For Subways, Trains, Trams, Platform Doors and Stations

Ideal for: Train Manufacturers, Integrators, Trains Operators and Transit Agencies
INFODEV offers complete Automatic Passenger Counting solutions for public transport companies, integrators, and rail vehicle builders.
New and exciting technologies are currently emerging in Infodev’s EDI Innovation Labs. Contact our sales team today to learn more.

INNODEV, THE LEADING PROVEN TECHNOLOGY

In operation since 1993, Infodev EDI is the world’s leader of Raw Accuracy in the industry of Automatic People and Passenger Counting Systems. Infodev EDI is a turnkey supplier working with public transport companies, integrators, and rail vehicle builders. Our headquarters and production facility are located in Quebec City, Canada with a regional office in Europe.

Infodev EDI is renowned for its cutting-edge technology and dedicated team of professionals. **Infodev EDI Automatic Passenger Counting systems have achieved many times a verified counting accuracy between 97.5% and 99.5% in trains without the application of any correction factors.** Infodev EDI sensors are integrated in an ultracompact, only 13.5 millimeter to 17 millimeters thick, aluminum bar. Infodev EDI offers TCPIP/PoE and high-performance wireless technologies, thus keeping all antennas inside the vehicles and eliminating a significant amount of costly cabling in the vehicles. **The end result is a high-accuracy, independent or fully integrated, lightweight, rapidly installed and easily maintained Automatic Passenger Counting system.**

New and exciting technologies are currently emerging in Infodev’s EDI Innovation Labs. Contact our sales team today to learn more.

INFODEV POSSESSES A CUTTING-EDGE EXPERTISE IN ALL THESE SPECIALTIES:

SERVICES

PROJECT MANAGEMENT  INSTALLATION  TECHNICAL SUPPORT  TRAINING

PRODUCT DESIGN, DEVELOPMENT AND PRODUCTION

ELECTRONICS  OPTICS  MECHANICS  FIRMWARE  APPLICATION SOFTWARE
The acquisition, installation, and commissioning of a new Automatic Passenger Counting system, requires effective preparation and supervision. Infodev’s dedicated and knowledgeable staff will gladly assist you with the design and implementation of your project and provide you with successful outcomes. In the early stage of a new project, they can help you to:

- Survey and study the physical particularities of your vehicles and infrastructure;
- Plan your IT systems, interfaces, and reports;
- Develop budget and schedule;
- Review applicable standards.
Automatic Passenger Counting
For Subways, Trains, Trams, Platform Doors and Stations

KEY ADVANTAGES OF OUR APC

No minimum height required for installation.

Sensors cover the entire door’s width and are installed directly above the gap.

No lateral or frontal obstruction of the field of view even in high density period.

Unaffected by light sources or speed of passage

ACCURATE AND RELIABLE

- **Accuracy between 97.5% and 99.5% has been proven many times**, provided by unique electro-optical technology that requires no correction factors (ex.: seasonal, per sensor, etc.).

- High-definition sensors that do not count small objects

- Counting data independent of passenger and luggage weight, for each station or stop and for any given period or specific time

- Simple and easy online access to application software, data, and customized counting reports

- Certification of counting accuracy using integrated video camera recording

- From single components to all-inclusive fixed price projects

ACCURACY RESULTS

No correction, uncertain counts, profiling, tempering or statistical manipulation applied to the data. *Real data from various customers between 2008 and 2017.*

INFODEV’S PASSENGER COUNTING SYSTEMS:
DESIGNED TO BENEFIT OUR CLIENTS IN EVERY WAY

Factory Calibrated Sensor Assemblies
Do not require any costly and time consuming recurring manual recalibration or data profiling.

Modular, Flexible & Simple Architecture
Installation on any vehicle door configuration with minimal cabling.

Quick & Easy Installation
Ingenious “bolt-on design” that allows for surface or recessed mounting of the counting system.

Optical Door Detection
No interface with door opening systems required.

From basic to complete software portfolio
Software and web apps developed in-house by our team of experts.

Discreet & Aesthetic
Sensors as low as 13.5 mm thick, allowing for a customized finish that can be easily integrated with the train’s interior fittings.

Low Maintenance
Effortless and simple, so you can invest your money elsewhere.

Compact Passenger Counting Computers
Hidden behind the vehicle’s inside panels or easily surface-mounted inside the vehicle.

No On-Board Central System Required
Infodev’s equipment installed on each pair of facing doors can operate independently of other on-board equipment.

Antennas Installed Inside the Vehicle
High sensitivity GPS modules and high performance RF modems eliminate complications relating to outside antennas.

Software and web apps developed in-house by our team of experts.
Automatic Passenger Counting
For Subways, Trains, Trams, Platform Doors and Stations

APC SYSTEM DIAGRAM

1. DA-400 Counting Sensor
2. GW-400 Counting Unit
3. RTL Real-Time Load Unit

GSD Communication platform
- Retrieval of Data
- Firmware Update
- Fleet Health Check / Diagnostic
- Requests for real-time information from third party

Patterns NG
- GPS Position
- Vehicle Number
- Passenger Counting Data
- Routes
- Run Assignment

WebReports
- Easily Create Valuable & Insightful Reports

Visual Fleet
- Allows your staff and users to view in real-time several realities of your fleet

Real-time fleet data
- Retrieval at fixed interval and every stop
Infodev EDI’s unique electro-optical technology uses an intelligent digital signal processing algorithm to accurately count passengers boarding and alighting public transit vehicles.

These sensors are only 13.5 to 17 mm thick, which allows for easy surface mounting above doors, even under tight clearance restrictions. **The DA-400 is a “plug and play” sensor. It is factory-calibrated and specially designed for a quick installation using only a few screws.** This clever “bolt-on design” eliminates the complications and the costs associated with alterations to the vehicles and multiple sensor adjustments during installation and commissioning.

The DA-400 sensors are highly accurate in detecting the passengers entering and exiting each door. The data produced is associated with specific doors, and the time and location of every stop or station. This detailed combined data makes it possible to generate customized and very specific reports that provide a strong base for profitable optimization decisions.

Our sensor uses its own invisible light source, in such a way that they are not affected by environmental conditions, as well as speed of passage or passengers standing idly under the sensor.

- Length of the bar and number of integrated sensor elements: depending on door width
- Weight (example): 1.1 kg for a three-sensor element DA-400, 800 mm (31.5”) long
- Integrated optical door detection
- Diagnostic LEDs activated during local technical intervention
- Industry Standard Certifications

DA-SERIES
GW SERIES

GATEWAY COUNTING COMPUTERS

These compact minicomputers are fully autonomous or can be easily connected to other existing on-board computers. They are installed inside the vehicles. Its built-in power supply can adapt to a wide range of voltages.

At each stop or station, the Gateways receive the signals from the DA-400 and transform them into counting data. The data is then stored in the Gateway’s memory until it receives a download command. The data is usually transferred via a wireless module (or GSM, or LAN) directly to the ground data analysis server or on-board computer. This saves on cabling costs and installation time.

The compact Gateways are easily hidden behind the vehicle’s inside panels.

Communication Options

- Ethernet-LAN/PoE;
- 802.11 b/g;
- Cellular GPRS/GSM;
- WiFi;
- Long-range RF;
- Serial RS-485/RS-232;
- Other options
Patterns NG
Useful Data When You Need It

15 years of practical deployment has allowed Infodev to create Patterns. A software that pairs the data from the APC system to the client’s database information. It resolves the difficult challenge of reading and matching schedule, trips and routes from external database with the data collected by the APC System (boarding and alighting counts as well as GPS positions).

WebReports NG
Efficiently Create Valuable & Insightful Reports:

A powerful and flexible web reporting tool that will provide detailed presentations of transit operations. Tables and graphs are used to analyze and forecast the counting data and schedule adherence. In addition, it gives access to a wide variety of performance reports (KPIs) specially designed in collaboration with experts and clients through the years.

* This software works in sync with Patterns

Visual Fleet NG
Visualize in Real-Time the status of your fleet:

This latest Infodev’s Web application allows transit operation teams to visualize the fleet in real time. Various data about location, schedule adherence and occupancy rates are displayed on a city map in real time.

The data available through this Web app is an essential tool for smart cities and transit organization to help improve customer experience.

Already have your own software running? Or want to build your own?

Infodev’s Application Programming Interface (API) uses Infodev expertise in processing and matching data to deliver accurate, powerful, versatile and easy to use information. Infodev’s API simplifies the software integration process, while providing more accurate results adjusted to transit schedules and overall operations.

This means an easy access to all the necessary data to create beautiful and user-friendly apps for users from operations employees to transit passengers.
